What are the intermediate	data in each question of interest: c) What is the most popular type
students' favourite subject	of ice cream flavour?
What is the average amou precipitation in Arizona?	t of d) What is the percentage increase in sales from last month
precipitationary	
precipitation in 7 th 2011 of	
	xtive
Quantitative Qua	
Quantitative Qua	ta in each question of interest:

Stratified random sampling occurs when
a population is subdivided (grouped) into smaller subgroups
a portion of the population is obtained in a way that each subject (people, object, species) has an equal ch
a portion of the population is systematically chosen (for example, every 5th person from a list)
111
Systematic random sampling occurs when
a population is subdivided (grouped) into smaller subgroups
a portion of the population is obtained in a way that each subject (people, object, species) has an equal ch
a portion of the population is systematically chosen (for example, every 5th person from a list)
Simple random sampling refers to a type of sampling where
a population is subdivided (grouped) into smaller subgroups
a portion of the population is obtained in a way that each subject (people, object, species) has an equal ch
a portion of the population is systematically chosen (for example, every 5th person from a list)
