Conversation 1.36

Sarah: Guess what? I'm going to the Amazon rain forest. You've been there. Can you tell me what vaccinations I need to get?

David: You'd better get a shot for yellow fever and, most importantly, you must take it at least ten days before your arrival. A shot for hepatitis is also recommended.

Sarah: What about malaria?

David: There isn't a vaccine for it, but you should take antimalaria pills in case you get bitten by a contaminated mosquito.

Sarah: And what should I pack?

David: You need to take sunscreen and insect repellent. You must take light clothing because of the heat. And it's a good idea to take long-sleeved shirts and long pants. You'll need them, especially in the evening and early morning when insects are at their worst.

Sarah: It seems a lot of trouble getting there.

David: Yes, but it's worth it. The scenery is amazing, but above all, the wildlife is fascinating.
