# Recycling at home

## 1. According to the first video please fill the blanks in the information.

Recycling is great because you limit the amount of _____ out in the world and _____ the amount of raw material that is needed to be extracted from our planet. You are also reducing the amount of _____ emissions that can help tackle the _____.
A very common mistake when recycling is assuming that everything can be recycled, that is called _____ and the problem is that if you don't separate every waste correctly the whole recycled bin goes to the trash. So, all of your efforts are wasted! One great example is a _____ that is made of cardboard, but as it has grease in it, it can not be recycled.

## 2. What can you and can you not recycle according to the video?

## 3. Match the concepts with the descriptions

| | |
|---|---|
| **Reduce** | **To process used material so that is usable again** |
| **Reuse** | **To use a product or material again as many times as possible** |
| **Recycle** | **To decrease the number of products that are consumed unnecessarily** |
