

NEOLITHIC PERIOD

LIFESTYLE AND SHELTER

During the Neolithic period humans begin to domesticate animals. They also begin to cultivate plants.

First villages are constructed in very fertile lands, near rivers, so they can access water easily. They use water mostly to feed animals and water the crops.

FOOD

Families start storing food in special bins or even in pits. This becomes a big progress because this way they can conserve food for food shortage.

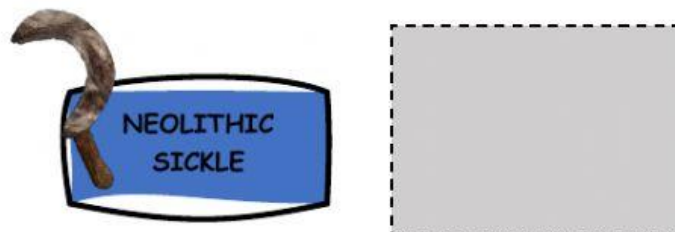

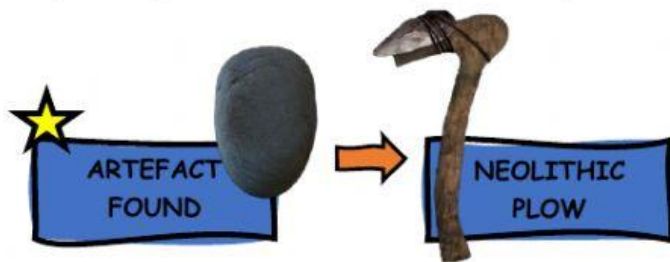

Neolithic humans start grinding cereal into flour to make elaborated food, as bread.

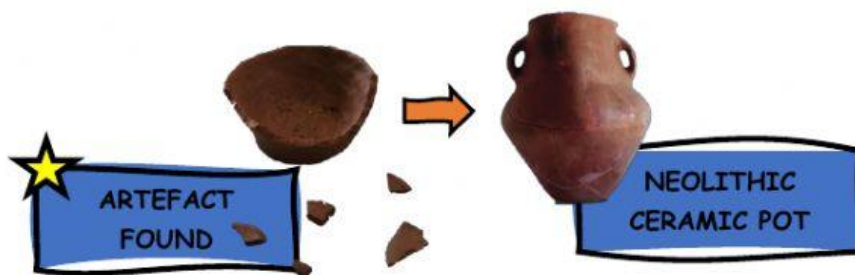

TOOLS

Now, it is easier to hunt and cultivate the land more effectively. Among others, Neolithic people invent the plow and the sickle, which they use for plowing and harvesting the crops.

Neolithic people also discover pottery and start making ceramics. They use ceramics utensils to storage food and also to cook.

ART

CLOTHES

Neolithic humans invent the loom, which Neolithic people use to weave clothes. From that moment on, clothes are more elaborated and they are more durable as well.

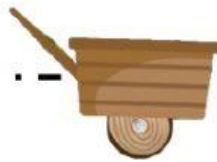

Thanks to the loom, they also manage to make first sails, which help them to navigate the seas.

THE GREAT INVENTION

THE WHEEL

This invention is equally important in modern times as well, it is impossible to imagine life without it, mostly when talking about transports.

SOME MODERN TRANSPORTS

CAR

BICYCLE

MOTORBIKE

SCOOTER
