E. Read the text and select the correct option with true (T) or false (F)

Human Brain vs. Computers

The human brain is an amazing organ. It is faster than any machine and directs and controls all of your movements.

Your brain commands your muscles by telling them how and when to move.

You can feel different emotions and protect yourself from dangerous situations thanks to your brain's instructions.

When you sleep, your brain does not stop working. There are billions of tiny little cells called neurons inside your brain. Neurons control your body's chemical and electrical messages.

LIVEWORKSHEETS
