

Placas tectónicas

A world map illustrating the boundaries of tectonic plates. The map uses different colors to represent different types of plate boundaries: red for convergent or destructive boundaries, green for divergent or constructive boundaries, and blue for transformant boundaries. Major plates are labeled with white boxes, and subplates are labeled with red dashed boxes. The map shows the distribution of plates across the globe, including the Pacific, Atlantic, Indian, and African plates, as well as various subplates like the Somali, Amurian, and Sunda subplates.

Cartografía:
Abel Gil Lobo (2020)

Fuentes:
