

# STARS

Stars are celestial bodies that emit their **own** light. For this reason, **they can illuminate other celestial bodies**.

Stars are very **large** but they appear very small to us.

Stars are very **far away** from the Earth.

Stars form groups called **galaxies**. **Some** groups of stars form figures. We call them **constellations**. We can see some of these **constellations** at night.

## 1. Read the sentences and choose the correct word.

- Stars are celestial bodies that **emit/don't emit** their own light.
- Stars are very **large/small** but they appear very small to us.
- We can see constellations at **night/day**.
- Stars form groups called **Universe/constellations**.
