FOSSILFUELS

There are many natural materials which we underground.	use, that can be found
Metals such as iron, tin, copper and aluminu special rocks called	ım can be found in
Before we can use these metals, we have to	them from
the rock. This process is called	. This is done by
the ore in a giant furnace. On	ce the ore has melted, it
can be cooled and made into metal.	
Oil and natural gas can also be found under	ground. Oil is made from
tiny dead, that have b	een trapped under
layers of rock for thousands of years.	
Oil can be used to make or t	o make fuel such as
petrol or diesel. We use petrol and diesel to	drive cars and other
machines.	
Materials that we burn are called	and they release
into the air, which warms t	he planet.
This is called
