## Life Cycles of Animals

A **life cycle** is a series of changes that a living thing goes through during its life.

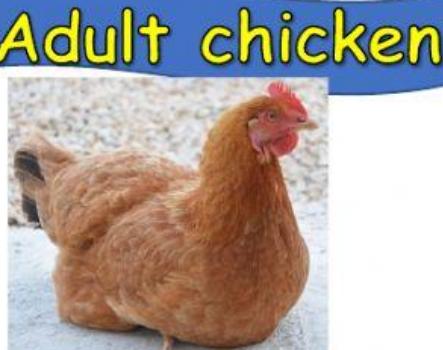

The hen lays and broods the eggs.

A hatchling breaks out of the egg.

### Life cycle of a chicken

When mature, the rooster and the hen mate and reproduce.

Big feathers start to develop and the chick rows into an adult chicken.

# Life cycle of a cat

## Newborn kitten

A kitten is born alive by a female cat.

## Adult cat

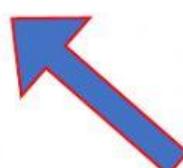

The mature male and female cats mate and reproduce their own offspring.

## Kitten

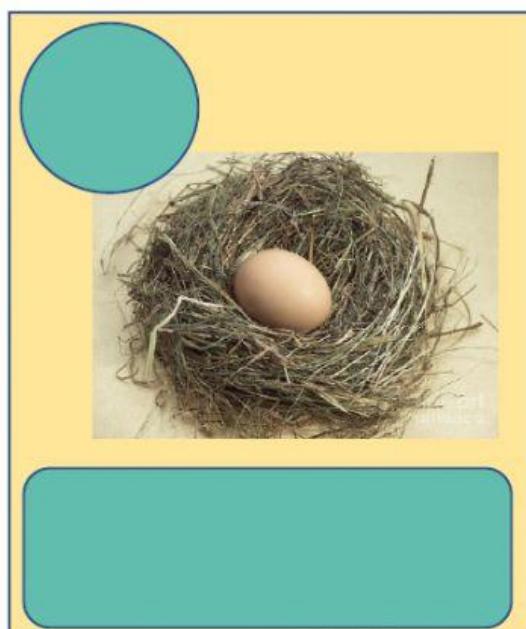

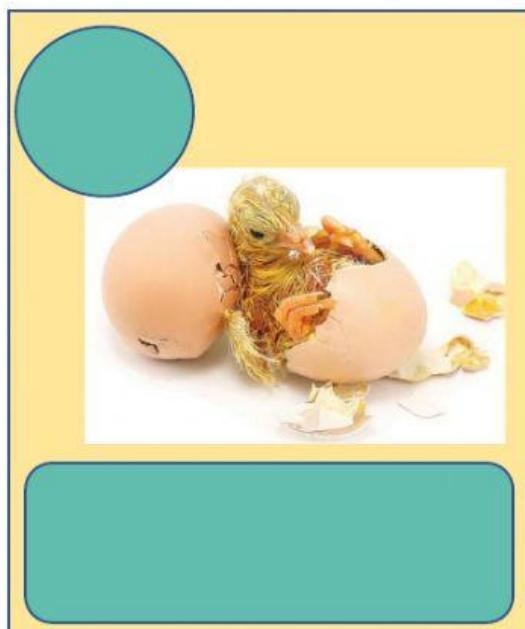

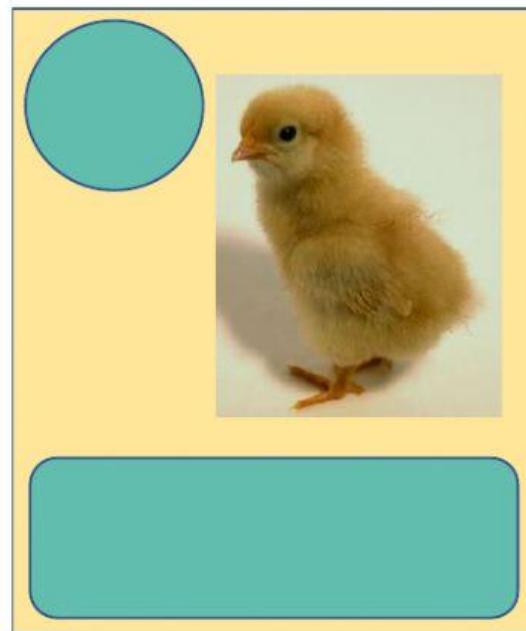

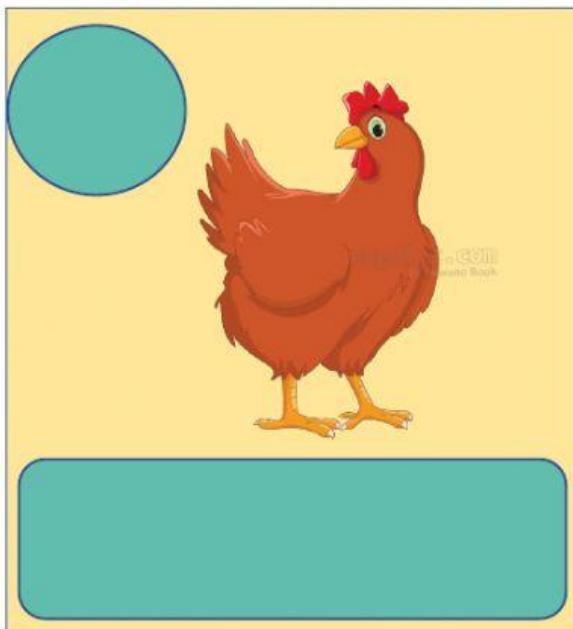

The kitten likes to play around and learn about its environment.
