

The cell Quiz

1. Which of the following is a function of a nerve cell?

- To help us think
- To produce energy
- To transport messages around the body
- To fight off bacteria
- To help us move

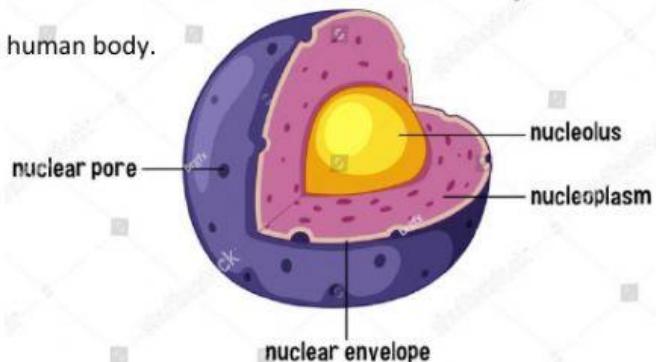

Human Nerve Cell

2. The nucleus is to the cell as the _____ is to the human body.

- Stomach
- Lungs
- Eyes
- Brain
- Ears

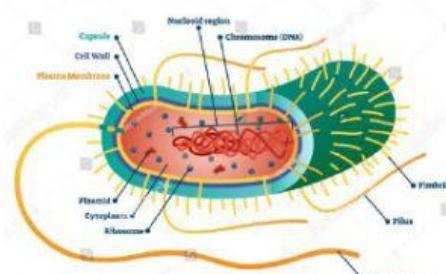

Cell Nucleus Anatomy

3. What is the name of the whip-like appendages that can help most prokaryotic cells move?

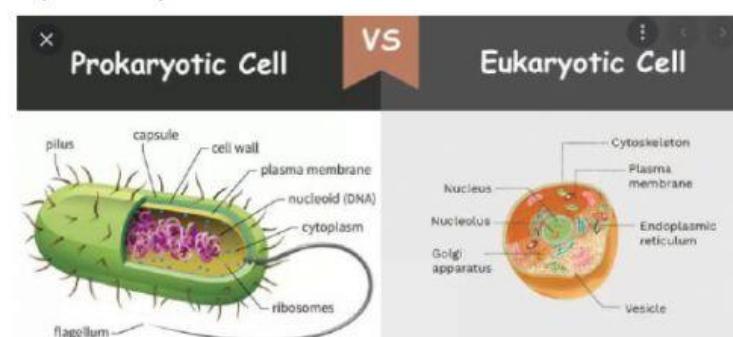

- Nucleus
- Flagella
- Mitochondria
- Ribosomes
- Lysosomes

PROKARYOTIC CELL

4. Which of the following is NOT made up of eukaryotic cells?

- Animals
- Bacteria
- Humans
- Plants
- None of the Above

5. True or False: Eukaryotic cells are typically a lot bigger and more complex than prokaryotic cells.

- TRUE
- FALSE

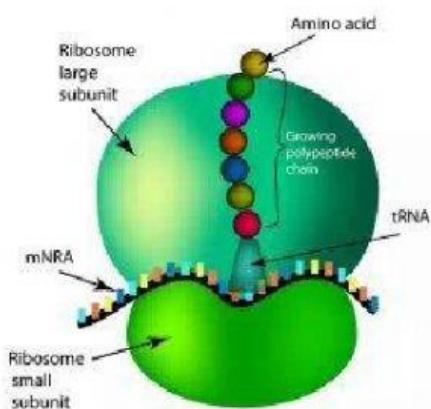

6. The skin is to the human body as the _____ is to the cell.

- a. Membrane
- b. Lysosomes
- c. Ribosomes
- d. Nucleus
- e. Mitochondria

7. Ribosomes make what type of organic substances?

- a. Carbohydrates
- b. Proteins
- c. Fats
- d. Nucleic Acids
- e. Simple Sugars

Ribosome

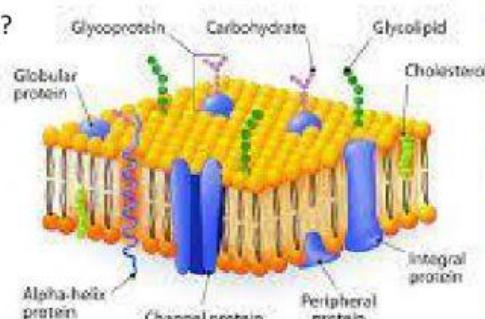

8. True or False: The cell membrane allows ALL substances into the cell.

- a. TRUE
- b. FALSE

CELL MEMBRANE

9. Which of the following is where the cell gets its energy?

- a. Membrane
- b. Lysosomes
- c. Ribosomes
- d. Nucleus
- e. Mitochondria

10. The nucleus, ribosomes, and lysosomes can be classified as:

- a. Bacteria
- b. The envelope of the cell
- c. Organelles
- d. The cytoplasmic region
- e. DNA

The parts of a cell	
1	Nucleus
2	Microtubule
3	Mitochondrion
4	Rough endoplasmic reticulum
5	Lysosome
6	Microfilament
7	Vacuole
8	Ribosomes
9	Golgi complex
10	Cell membrane
11	Dendrite
