

# Melody

Directions: Read the paragraph below that explains melody. Then try to name the songs that follow.

Melody is a recognizable tune or line in a song. It is a group of pitches (high and low) combined with a rhythmic pattern that makes a song recognizable or even danceable.

Sometimes lyrics accompany melodies to make them even more recognizable. For example, if your friend hummed a song in your ear and asked you to name the song you might be able to say the name of the song because you have heard the melody before.

Try it, see if someone in your house can name a song just by hearing you hum it!

Can you name these songs?
