

I. Change the following equations into $y = mx + b$, then determine the slope (m) and y-intercept (b). *note: use "/" to write in fraction form. Ex. $3x/2$

Given	$y = mx + b$	Slope (m)	y-intercept (b)
1. $3x - 2y = 6$			
2. $7x + 5y - 21 = 0$			
3. $4x + 2y = 9$			
4. $x - 2y - 6 = 0$			
5. $-3x + 3y + 12 = 0$
