GREEN ENERGY FOR TODAY AND TOMORROW

Fossil fuels are _____, _____, and _____. They are made from plants that grew _____ of years ago. We use _____ to drive our cars and trucks. We also burn them in _____ to make electricity for homes and school.

However, fossil fuels make _____. So, scientists want people to use _____.

Green energy is very important. It's _____ and clean. It doesn't hurt the Earth. Green energy gives us almost _____% of the electricity we use today.

There are _____ main sources of green energy.

First, _____ uses moving water in rivers and dams to make electricity. It makes _____% of the electricity we use.

Wind power is also a green energy. Today, _____ make electricity. There are many wind turbines in a _____. Wind power makes _____% of the electricity we use.

Next green energy is biomass. It's energy that we get from _____. People burn _____ or grass in power plants to make electricity. Scientist also turn _____ into fuel for our cars. _____ makes 2% of the electricity we use.

The last main source of green energy is solar power. It's _____ because the sun always shines in the sky. We use _____ to collect the energy from the sun and make electricity. Solar power makes _____% of the electricity we use.

There are also other sources of green energy like _____ on the ocean and _____ under the Earth's surface. Someday, green energy could make _____% of the electricity we use.
