

Converting from Standard form to Slope-intercept form.

Show work on another piece of paper.

Convert from the given standard form of a linear equation to the slope-intercept form of a linear equation.

1. $x + 5y = 5$

2. $3x + 2y = 4$

3. $2x + y = 4$

4. $4x - 2y = 6$

5. $8x - 4y = 16$

6. $3x + 4y = 4$

7. $9x - 4y = -16$

8. $2x - 5y = 10$

9. $3x + 5y = -25$

10. $7x - y = 4$
