Activity: Graph of a Polynomial Function

Describe the given graph of a polynomial function.

1. $f(x) = -x^5 + 2x^3 - x$

end behavior of the graph

Degree

Sign of the leading coefficient

no. of turning points

y-intercept

x-intercepts

multiplicity of zeros

The graph _____ has _____ multiplicity the x-axis at _____

The graph _____ has _____ multiplicity the x-axis at _____

The graph _____ has _____ multiplicity the x-axis at _____

2. $f(x) = x^4 - 3x^2 - 2x$

end behavior of the graph

Degree

Sign of the leading coefficient

no. of turning points

y-intercept

x-intercepts

multiplicity of zeros

The graph _____ has _____ multiplicity the x-axis at _____

The graph _____ has _____ multiplicity the x-axis at _____

The graph _____ has _____ multiplicity the x-axis at _____

How many attempts? ____.
How well did you do?

Need help!

Just OK!

Splendid

I FEEL THAT...
