

Unit 10 Pollution is everywhere.

คำชี้แจง : ต้องคำตอบจากเรื่องที่ฟัง ดูหน้าที่ 113 ประกอบ

Our world today is facing lots of pollution, air pollution, water pollution, New and soil pollution. Our world is in danger now. It is not safe to breathe the air, to eat food or to enjoy ourselves. We must not throw plastic bags and garbage in canals, rivers, and seas. The garbage makes water dirty and smelly. Water pollution kills marine life such as fish, turtles, and corals. It is not fun to swim in the sea with garbage around us. Farmers must not burn their crops after the harvest. Crop burning causes dust and carbon dioxide in the air. Air pollution is not good for our health. Farmers must not use pesticides in their farms and plantations. Pesticides pollute the soil. Soil pollution is not good for growing crops such as vegetables, fruit, and rice. If the pollution becomes worse, our life will be in more danger too.

1. What kind of pollution are we facing today?

.....

2. List 3 ways to save our world?

.....
.....
.....

3. How does crop burning cause air pollution?

.....
.....
.....

4. Give example to show how garbage kills marine life

.....
.....

5. What can you do to make your town/village a good living place?

.....
.....
.....
