

NAME: _____

DATE: _____ GRADE: 5 ____

SCIENCE AND TECHNOLOGY EXAM

Section 1: Answer these questions correctly

1) What is the skeletal system?

2) What is the skeletal system made up of?

3) This system is responsible for carrying nutrients and oxygen to the rest of the body, it carries deoxygenated blood to the lungs to get oxygen?

.(6mks)

Fill in the blanks

Food Digestion body energy

1) _____ is the process by which _____ and drink are broken down into smaller parts so that the _____ can use them to build and nourish cells and to provide _____.(4mks)

Section 2: Choose the correct answer.

- 1) The function of the circulatory system is to:
 - a) Carry blood alone.
 - b) Hold up the body.
 - c) Transport blood and oxygen.

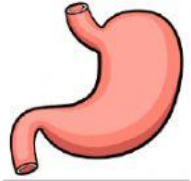

- 2) One of the main functions of the skeletal system is to:
 - a) Maintain a healthy Body.
 - b) Provide Locomotion (Movement).
 - c) Help Transport blood through the body.

- 3) One of the main parts of the circulatory system is the:
 - a) The blood.
 - b) The tendons.
 - c) The Joints.

- 4) The skeletal systems is responsible for:
 - a) Carrying blood through the body.
 - b) Production of blood cells.
 - c) Veins.

(4mks)

Section 3: Place the correct part of the body to the correct system (6mks)

Body Part	
Stomach 	Circulatory System
Heart 	Skeletal System
Joints 	Endocrine System
	Digestive System
