Section 3: How we hear a sound. Drag and drop the words into the correct order.

outer ear	brain	ear drum	hear
inner ear	ear canal	three tiny bones	

1. First, the sound reaches the outer ear.
2. Second, the sound goes down the _____.
3. Thirdly, the sound vibration makes the _____ vibrate.
4. Fourthly, _____ are shaken by the vibration.
5. Fifthly, the _____ sends a message to the _____.
6. At last, we _____ the sound.

Section 4: Use the chart below to answer. Write True or False.

1. Bats can hear higher frequencies than sea lions. _____
2. Frogs hear the greatest range of sound. _____
3. Dogs can hear lower sounds than humans. _____
4. Rodents can hear lower sounds than humans. _____
5. Bats, rodents, and dogs can hear higher sounds than humans.

Section 5: Drag each drawing of sound waves to its correct space.

1. A soft and low pitch sound wave.

2. A loud and low pitch sound wave.

3. A soft and high pitch sound wave.

4. A loud and high pitch sound wave.

Section 6: Fill in the blanks.

Volume	jaws	travels	energy	heard
pitch	echo	location	sounds	

1. Sound is _____ that can be _____.
2. The high or low frequency of a sound is called its _____.
3. Snakes hear by feeling vibrations in their lower _____.
4. Dolphins use _____.
5. Sound _____ in waves.
6. _____ is the loudness of a sound.
7. Our ear drums vibrate when we hear _____.

Section 7: Match the sound to its volume and pitch.

hummingbird

Low Pitch and Loud Volume

police whistle

High Pitch and Loud Volume

lion roar

Low Pitch and Soft Volume

bird song

High Pitch and Soft Volume
