Sum It Up!

When you're done, use the answer key to check and revise your work.

Write the term that matches each photo and caption.

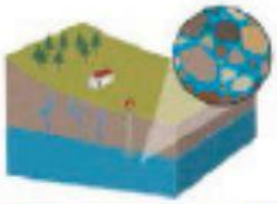

1 Water can be stored for a long time in a large, slow-moving mass of ice.

_____

2 Water can also be stored underground between the spaces in soil particles or cracks in rocks.

_____

3 During heavy rains, some water might not soak into the ground. Instead, it flows down slopes and across Earth's surface.

_____

Summarize

Fill in the missing words to describe the water cycle.

The water cycle shows how water moves from Earth's surface to the 4. _____ and back again. The 5. _____ provides the energy for the water cycle. Water on the surface of the ocean heats up. During 6. _____, it changes from a liquid to a gas. As 7. _____ rises into the atmosphere, it cools. During 8. _____, it changes from a gas to a liquid. Billions of water droplets form a 9. _____. When the droplets get too large for air currents to keep them up, they fall to Earth's surface as 10. _____.
