Egrets 吳郭魚 白鷺 蕨類

There are many egrets around Dahu Park. Egrets usually live near water like lakes, rivers and swamps (沼澤).

They like to eat fish and insects. But, they also eat some small reptiles (爬蟲動物) like lizards or small snakes. Sometimes an egret even eats a small frog!

They build their nests with sticks and feathers. Then, the mom will lay the eggs.

The mom and dad take turns to sit on the nest until the baby egrets come out.
