

## In the US, the New Look of Gas Exploration

This is the VOA Special English Economics Report.

Many people think the search for cleaner energy leads only to renewable resources like sun, wind and ..... But it also leads to a fossil fuel. Natural gas is considered the cleanest of the fossil fuels, the fuels created by plant and animal remains over millions of years.

Burning it releases fewer pollutants than oil or coal. The gas is ..... methane. It produces half the carbon dioxide of other fossil fuels. So it may help cut the ..... of carbon gases linked to climate change.

Russia is first in what are called "proved reserves" of natural gas. The United States is sixth. Over the years, big oil and gas companies ..... much of the easily reached supplies of gas in America. They drilled straight down into formations where gas collects. As ..... supplies were used up, big drillers looked for similar formations in other countries.

But now the industry is taking a new look. Companies are developing gas supplies trapped in shale ..... two to three thousand ..... underground. They drill down to the shale, then go sideways and inject high-pressure water, sand or other material into the rock.

This causes the ..... to break, or fracture, releasing the gas. Huge fields of gas shale are believed to lie under the Appalachian Mountains, Michigan and the south-central states.

Gas shale exploration is being done mainly by ..... to medium sized companies.

Eric Potter is a program director in the Bureau of Economic Geology at the University of Texas at Austin.

ERIC POTTER: "The types of opportunities that are left for natural gas exploration in the U.S. have changed. So it's a different class of resource -- not as ..... to develop, and not even recognized as something worth pursuing, say, twenty years ago."

He says more than half the gas in the United States is now coming from these new reserves.

But hydraulic fracturing can ..... produce debate and anger over the ..... of groundwater pollution. This method of drilling is not federally supervised under the Safe Drinking Water Act. Some in Congress want to end that exemption from the law.

..... gas provides Americans with about one-fourth of their energy. And, unlike oil, most of it is produced in America. Gas producers invested heavily in reaching new supplies when ..... were high. But prices are ..... sharply now because the recession cut demand for energy. So energy expert Eric Potter says it is too early to know how the new gas shale reserves will affect the .....

And that's the VOA Special English Economics Report, written by Mario Ritter. I'm Steve Ember.
