

Recuerda que cualquier número entero se puede poner en forma de fracción:

$$2 = \frac{4}{2} = \frac{6}{3} = \frac{4}{4} = \dots$$

Sumas y restas de fracciones

Opera simplificando al máximo:

$$1 + \frac{3}{10} - \frac{1}{4} = \frac{\quad}{20} + \frac{\quad}{20} - \frac{\quad}{20} = \frac{\quad}{20}$$

$$3 + \frac{2}{5} - \frac{9}{4} = \frac{\quad}{20} + \frac{\quad}{20} - \frac{\quad}{20} = \frac{\quad}{20}$$

$$2 - \frac{2}{5} - \frac{3}{10} = \frac{\quad}{10} - \frac{\quad}{10} - \frac{\quad}{10} = \frac{\quad}{10}$$

$$\frac{5}{6} - 2 - \frac{7}{4} = \frac{\quad}{12} - \frac{\quad}{12} - \frac{\quad}{12} = \frac{\quad}{12}$$

$$6 + \frac{2}{10} - \frac{1}{6} = \frac{\quad}{30} + \frac{\quad}{30} - \frac{\quad}{30} = \frac{\quad}{30}$$

$$\frac{3}{8} - \frac{1}{4} + \frac{5}{6} - 3 = \frac{\quad}{24} - \frac{\quad}{24} + \frac{\quad}{24} - \frac{\quad}{24} = \frac{\quad}{24}$$

$$3 - \frac{1}{5} + \frac{5}{6} - \frac{3}{10} = \frac{\quad}{30} - \frac{\quad}{30} + \frac{\quad}{30} - \frac{\quad}{30} = \frac{\quad}{30}$$

$$\frac{3}{20} - \frac{4}{5} - \frac{9}{10} + 2 = \frac{\quad}{20} - \frac{\quad}{20} - \frac{\quad}{20} + \frac{\quad}{20} = \frac{\quad}{20}$$
