

Plant sexual and asexual reproduction

1. Parts of the flower: Drag and drop the name of the part of the flower to the correct picture. 

2. Asexual reproduction: Match the picture and the definition of the different methods. 

 **Stolons:** Stems that grow horizontally above the ground.

 **Rhizomes:** Stems that grow horizontally under the ground.

 **Bulbs:** Underground stems that store food. Roots grow from the bottom.

 **Tubers:** Underground stems that develop roots from growing point called eyes.
