

At the end of this lesson, you should be able to:

- ☐ Find the multiples of a given number,
- ☐ Find the common multiples of given numbers.

MULTIPLES

A **multiple** of a number is the result of multiplying the number with other whole numbers.

Example: What are *the first five* multiples of 3?

$1 \times 3 = \square$

$2 \times 3 = \square$

$3 \times 3 = \square$

$4 \times 3 = \square$

$5 \times 3 = \square$

**FILL IN
THE
BOXES.**

Vocabulary Box

FACTORS

MULTIPLES

COMMON

The numbers in the box are some of the multiples of 3.

So, the *first five* multiples of 3 are ____, ____, ____, ____ and ____.

Example: Find the **first three common multiples** of 4 and 6.

The **first three common multiples** of 4 and 6 are
____, ____ and ____.
