A B C
it occurred.
D

5. All the visitors was prevented from continuing
A B
their exploration because of the uninformed landslide.
C D

C. READING

IX Read the passage. Answer the questions below.

Hurricanes, cyclones, and typhoons are all the same weather phenomenon; we just use different names for these storms in different places. In the Atlantic and Northeast Pacific, the term “hurricane” is used. The same type of disturbance in the Northwest Pacific is called a “typhoon” and “cyclones” occur in the South Pacific and Indian Ocean. The ingredients for these storms include a pre-existing weather disturbance, warm tropical oceans, moisture, and relatively light winds. If the right conditions persist long enough, they can combine to produce the violent winds, incredible waves, torrential rains, and floods we associate with this phenomenon. In the Atlantic, hurricane season officially runs June 1 to November 30. However, while 97 percent of tropical activity occurs during this time period, there is nothing magical in these dates, and hurricanes have occurred outside of these six months.

1. Which name is used for very big storms in Northwest Pacific?
.....
2. Where is the name “cyclones” used?
.....
3. What are the features of the severe storms which occur within a long time?
.....
4. When do hurricanes often occur?
.....
5. Is it possible that hurricanes can occur even when it is not hurricane season?
.....
