Math

Shape Patterns

We can use different pieces of information to sort things out:

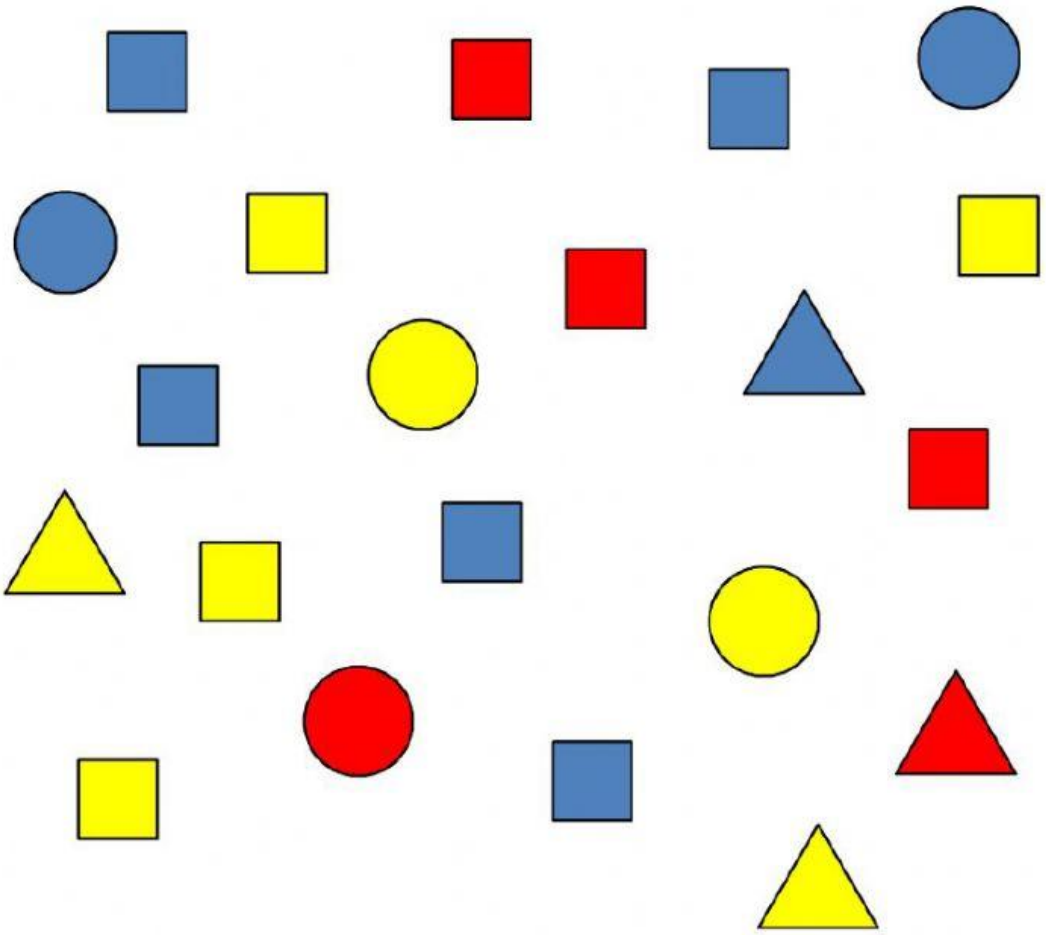

Sorting by shapes: count the shapes.

How many rectangles? _____ How many squares? _____

How many triangles? _____ How many circles? _____

Sorting by colors: count the shapes according to the color.

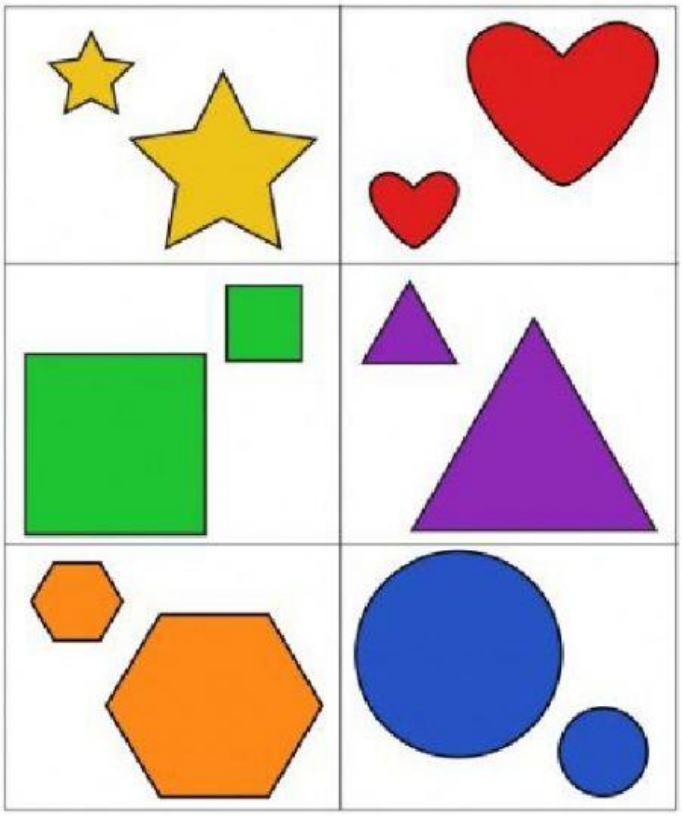

How many are yellow? _____

How many are blue? _____

How many are red? _____

Sorting by size: count the shapes according to the size.

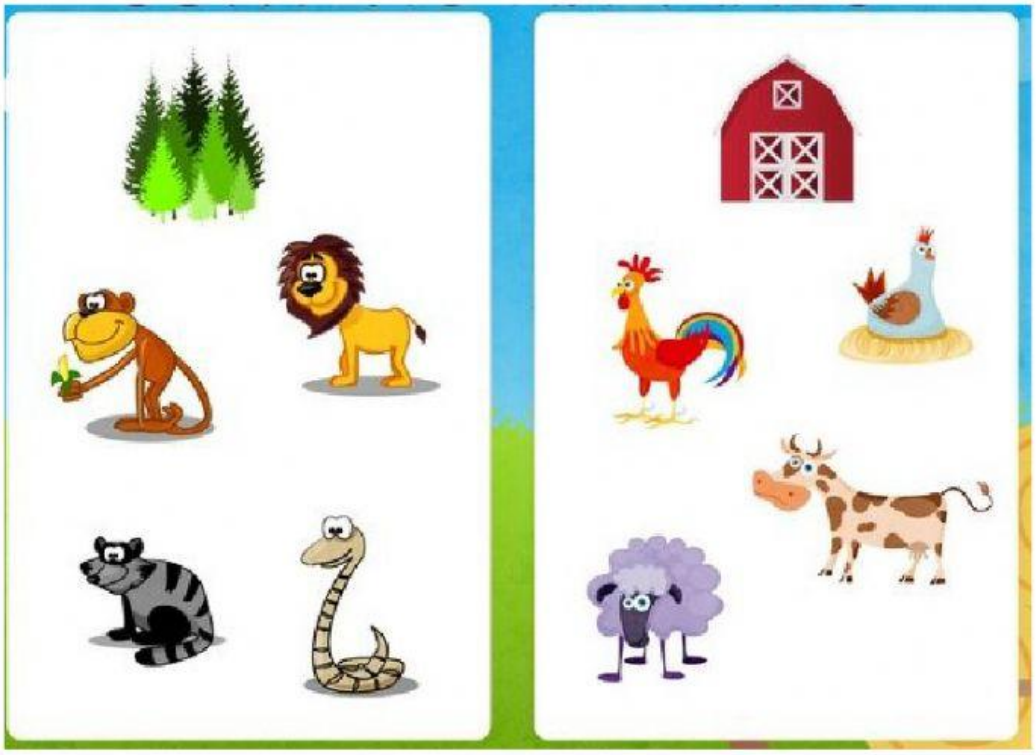

How many are large? _____

How many are small? _____

Why sorting things can be useful for us?

1) We learn things are alike or different.
2) We learn things can belong to a certain group.

Guess the rule: how were these animals sorted?

_____

_____

Let's play a game?
