

Name _____ Grade _____ No. _____

Unit 4 : Electricity

Topic : Heat coupling

Fill in the blanks

calculators	heavy	electrical current	chemical	tube shape
Michael Faraday	magnetic induction	220 volts	heat coupling	water power

1. _____ comes from the movement of an electrical charge.
2. Dry-cell battery change the _____ energy into electric power.
3. The dry cell battery is in a _____ produces about 1.5 volts.
4. A car battery is very big and _____.
5. Solar cells are often used in small things like _____ and clocks.
6. If we connect two different types of metal wires that are at different temperatures, an electrical current will be created by the process of _____.
7. _____ is the British scientist who invented the dynamo.
8. Electrical current is made by rotating a coil of wire in a magnetic field, It is called _____.
9. In Thailand, houses use about _____ of power.
10. Electricity can be made by _____.
