

RISTKÜLIKU JA RUUDU ÜMBERMÕÖT

1. Märgi õiged valikud.

Ristkülik ja ruut on tasapinnalised / ruumilised geomeetrilised kujundid.

Ruut on kolmnurk / nelinurk.

Ruudu kõik küljed on võrdse / erineva pikkusega.

Ristküliku vastasküljed on võrdse / erineva pikkusega.

Ruut ja ristkülik on nelinurgad, mille nurgad on teravnurgad / täisnurgad / nürinurgad.

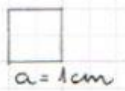

Ruut on lahtine / kinnine murdjoon.

2. Vaata joonist ja arvuta peast übermõõt P.

$$P = a + a + a + a$$

$$P = 4 \cdot a$$

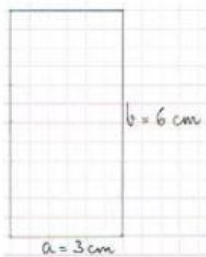

$$a = 1 \text{ cm} \quad P = \dots \text{ (cm)}$$

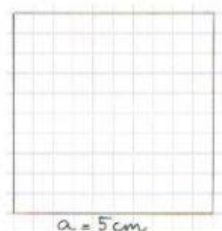

$$P = 2 \cdot a + 2 \cdot b$$

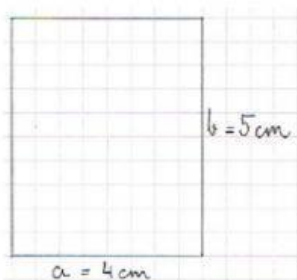

$$P = 2 \cdot (a + b)$$

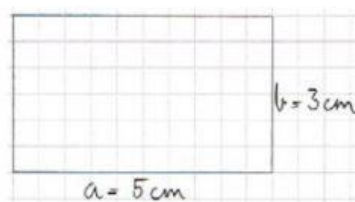

$$a = 3 \text{ cm} \quad b = 6 \text{ cm} \quad P = \dots \text{ (cm)}$$

$$a = 5 \text{ cm} \quad P = \dots \text{ (cm)}$$

$$a = 4 \text{ cm} \quad b = 5 \text{ cm} \quad P = \dots \text{ (cm)}$$

$$a = 5 \text{ cm} \quad b = 3 \text{ cm} \quad P = \dots \text{ (cm)}$$
