1. When archaeologists find a new discovery, they have to _____ it.
2. To learn about a person's family, archaeologists do a _____.
   This test tells them who the person's father was, for example.
3. We can find out what people ate before they died. We can take a _____ of food from inside the person's stomach.
4. Archaeologists always study the _____ where something was discovered. This helps them to learn why people lived there.
5. Archaeologists often look for pottery and other _____ near the site. These objects help them learn how people lived.

a sample

7 **Listen and stick.** Order the stickers to tell how the archaeologist solved the mysteries. Work with a partner. TR: B15

How did she discover they were from the same family?

I think she did a DNA test!

They were from the same family.	They ate meat.	They were rich.	They lived close by.	We don't know how they died.
