$$4x + 10 = 30$$

$$4x = 30 \square \square$$

$$x = \frac{\square}{\square}$$

$$x = \square$$

$$-7x - 12 = 9$$

$$-7x = 9 \square \square$$

$$x = \frac{\square}{\square \square}$$

$$x = \square \square$$

$$-4x - 27 = 2x + 9$$

$$-4x - 27 = 2x + 9$$

$$-4x \square \square = 9 \square \square$$

$$\square \square x = \square \square$$

$$x = \frac{\square \square}{\square \square}$$

$$x = \square \square$$
