

### Organizing The Periodic Table

Directions: Correctly label the different parts of the periodic table using the words in the word bank.

#### Word Bank

actinides	lanthanides	nonmetals
alkali metals	metalloids	transition metals
alkaline earth metals	metals	
halogens	noble gases	

The diagram shows a periodic table grid with 10 numbered boxes and arrows pointing to specific regions for labeling:

- 1. Points to the top-left corner (Hydrogen).
- 2. Points to the first two columns (Alkali and Alkaline Earth Metals).
- 3. Points to the first column (Alkali Metals).
- 4. A bracket under the first 10 columns (Metals).
- 5. Points to the first two rows of the bottom section (Lanthanides and Actinides).
- 6. Points to the first row of the bottom section (Lanthanides).
- 7. Points to the top-right corner (Noble Gases).
- 8. Points to the last two columns (Halogens and Noble Gases).
- 9. Points to the last column (Noble Gases).
- 10. Points to the transition metal block.

The bottom-right corner of the grid is labeled "Not Known".
