

ENGLISH WORKSHEET FOR EXPLANATION TEXT

NAME :

CLASS :

Watch this video and comprehend the process of how the covid 19 virus spreads?

Questions : Answer These Questions Correctly By Choosing A, B, C, D Or E!

How does COVID 19 virus spread between people?

COVID-19 is caused by the SARS-CoV-2 virus, which spreads between people, mainly when an infected person is in close contact with another person.

The virus can spread from an infected person's mouth or nose in small liquid particles when they cough, sneeze, speak, sing or breathe heavily. These liquid particles are different sizes, ranging from larger 'respiratory droplets' to smaller 'aerosols'.

Other people can catch COVID-19 when the virus gets into their mouth, nose or eyes, which is more likely to happen when people are in direct or close contact (less than 1 metre apart) with an infected person. Current **evidence** suggests that the main way the virus spreads is by respiratory droplets among people who are in close contact with each other.

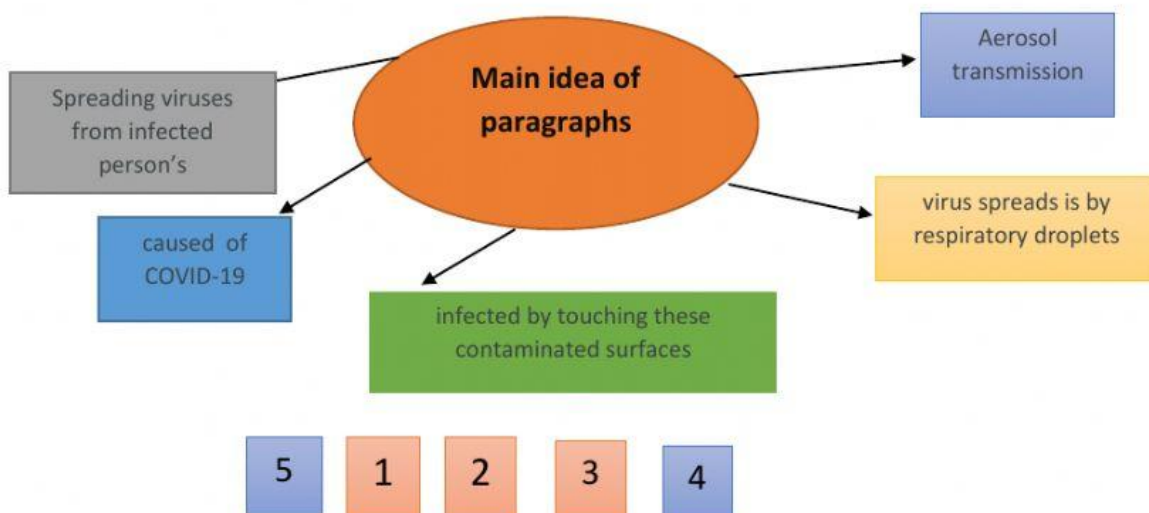

Aerosol transmission can occur in specific settings, particularly in indoor, crowded and inadequately ventilated spaces, where infected person(s) spend long periods of time with others, such as restaurants, choir practices, fitness classes, nightclubs, offices and/or places of worship. More studies are underway to better understand the conditions in which aerosol transmission is occurring outside of medical facilities where specific medical procedures, called aerosol generating procedures, are conducted.

The virus can also spread after infected people sneeze, cough on, or touch surfaces, or objects, such as tables, doorknobs and handrails. Other people may become infected by touching these contaminated surfaces, then touching their eyes, noses or mouths without having cleaned their hands first.

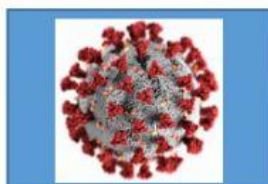

1. What does the writer's aim in writing this text?
 - A. To explain why Corona is dangerous for human being
 - B. To explain how covid 19 viruses spread among human
 - C. To retell the corona viruses infected patients
 - D. To explain the total of corona patients in Indonesia
 - E. To describe about corona viruses
2. How does this virus spread between people?
 - A. touching their eyes, noses or mouths by having cleaned their hands first.
 - B. infected person is in close contact with another person

- C. using same tools
 - D. it happen in good circulation room
 - E. it happen in social distancing places
3. How to prevent the spreading of this virus?
- A. spend long periods of time with others in crowded places
 - B. touching these contaminated surfaces
 - C. Contact with infected people sneeze
 - D. Always cleaned hands first.
 - E. Long distances
4. "Current evidence suggests that the main way..." the underlined word has similar meaning to...
- A. Decision
 - B. Proof
 - C. Facilities
 - D. Tools
 - E. Sources
