Meet the BOTS

Domestic robots (robots that clean your house) are very popular as well. There are a lot of different robots that vacuum your room for you. The Botvac, for example, uses lasers to scan and map your room before choosing the best route to clean the entire room. And if you don't like doing yard work, the Robomow will cut the grass for you.

Easton LaChappelle

Explorer robots are incredibly useful, too. Two Mars rovers, Opportunity and Curiosity, are exploring Mars. Amazing! What will future bots do?
