

Kevin and his family just moved to a new neighbourhood, so they are holding a party for their new neighbours.

1. For the party, they prepared a few snacks for everyone. If he prepared 30 snacks, how many did his grandmother prepare if they have a total of 100 cupcakes?

2. They also prepared some chips. If he prepared 50 grams of chips and his father prepared 20 grams, how many grams of chips should there be?

4. Their neighbours, wanting to welcome them, also brought in some food. If one neighbour brought 70 hotdogs and another neighbour brought 20 hotdogs, how many hotdogs were brought by the neighbours in total?
