

These are easy!

1. Multiply the whole number by the fraction's denominator (bottom number)
2. Add that to the numerator (top number) and rewrite the fraction.

1. $2 \frac{3}{4} = \frac{11}{4}$ (2 times 4 is 8. Add the 8 to the 3 to make 11.)

Now try these:

1. $5 \frac{1}{2} = \square$

2. $8 \frac{2}{5} = \square$

3. $7 \frac{4}{5} = \square$

4. $8 \frac{7}{8} = \square$

5. $3 \frac{1}{4} = \square$

6. $4 \frac{1}{5} = \square$

7. $6 \frac{1}{3} = \square$

8. $4 \frac{1}{4} = \square$

9. $3 \frac{2}{3} = \square$
