

## English Activity

Name:

By Teacher Patricia Lema

Class:

Date:

" \_\_\_ vital organs are those that \_\_\_ person needs to survive. \_\_\_ problem with any of these organs can quickly become life-threatening. \_\_\_ \_\_\_ human body, there are five vital organs that people need to stay alive. \_\_\_ brain is \_\_\_ body's control center. It forms \_\_\_ core of \_\_\_ central nervous system by creating, sending, and processing nerve impulses, thoughts, emotions, physical sensations, and more. It's located \_\_\_ the head. \_\_\_ heart is \_\_\_ most important organ of \_\_\_ circulatory system, which helps deliver blood to \_\_\_ body. It works with \_\_\_ lungs to add oxygen to \_\_\_ blood and pump it around the body. \_\_\_ liver is \_\_\_ most important organ of \_\_\_ metabolic system. It helps convert nutrients into usable substances and filters blood coming from the digestive tract. \_\_\_ kidneys are \_\_\_ pair of bean-shaped organs. They are located \_\_\_ either side of the back. They help filter blood and remove waste from \_\_\_ body. "
