1. Read the text below and choose the correct word for each blank from the choices given in the chart.

BONOBOS

There aren't any animals _____ intelligent as humans, but some animals are very clever, like the bonobos. Bonobos are _____ the same family as chimpanzees and gorillas. _____ people call them 'pygmy chimpanzees', but they are different. Bonobos aren't as aggressive as chimpanzees. They are very similar to humans, and according to some scientists, they are _____ intelligent than any other animal.

In what ways are bonobos similar to humans? Young bonobos stay with _____ mother for _____ years and she teaches them skills such as using rocks and sticks to get food. They also play some of the games of human children. It's very interesting to watch them play _____ games. In one game, a bonobo covers its eyes with its hands and runs around trying to catch its friends - just like human _____ do. Scientists _____ teach bonobus how to communicate _____ humans. They can understand words and they use pictures to answer questions. They are amazing!

Sadly, there are only about 35,000 bonobos in the wild today because humans move into their habitat or kill _____. Unfortunately, humans aren't always as nice as bonobos. We _____ learn so much from these clever animals.
