# IELTS Writing – supportive task 1 #194

The graph shows data about the annual earnings of three bakeries in Calgary, 2000-2010.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Put the words belows in the blanks

upward	income	opposite	earned	approximately	rose	figure	considerable

The graph shows information about the amount of money which was _____ by three bakeries in Calgary, over a ten-year period between 2000 and 2010.

Overall, what stands out from the graph is that there were considerable _____ trends in the income of both Bolo Cakery and Amandine Bakery, while the earnings of Mari Bakeshop saw a _____ fall over the period in question. Another interesting point is that Mari Bakeshop was the most popular bakery in 2000, but in 2010, Amandine Bakery earned more money than the others.

Looking at the details, as regards Bolo Cakery, _____ started at $20,000 in 2000, then there was a fluctuation over the next three years, at which point it levelled off at just under $40,000 until 2006. Then the _____ went up significantly, finishing at around $65,000 in 2010. If we look at Amandine Bakery, the trend was similar. Having remained stable at _____ $55,000 in the first half of the decade, income then _____ sharply, reaching nearly $100,000 in 2008. There was then a gradual rise to around $105,000 in 2010.

By contrast, the income of Mari Bakeshop went in the _____ direction. Takings fluctuated around $90,000 until 2004. After That despite falling sharply to just over $40,000 in 2008, the figure then levelled off in the last two years.
