

ANIMALS HAVE **ADAPTED** TO SURVIVE **EVERYWHERE**

Complete the gaps

Polar bears are a good example. they have layers of fat under their.....,which means that they can swim in freezing water. Not only this, but it's very difficult for other animals to see them in the snow. Because they have completely white....., they can easily run up to other animals and attack with their huge.....

Another amazing animal is the ptarmigan. This artic bird is also white, which helps it hide in the snow. However, when the snow melts, the bird's ....., change color. From its head to its ....., it turns grey to match the rocky environment.

Plants have adapted, too. This bee orchid looks exactly like it has a real bee resting on its ..... This bee is actually part of the flower and its nature's way of attracting real bees to the orchid.

Many fish can change the colors of their ..... instantly to match their background.

At first, you might think that this is a ..... but it's really an Indian leaf butterfly, sitting on the ..... of a tree. because it doesn't look like a butterfly, it can hide from other animals that would like to eat it.

This amazon jungle spider also has an inventive way of protecting itself. It creates a..... which looks like a much larger spider, possibly to frighten other animals.
