

Mathematics
Whole Numbers - Fraction

REMEMBER – To take a fraction from a whole, change one whole into a fraction with the same denominator as the fraction you are taking away.

Example:

$$4 - \frac{1}{3} =$$

$$3\frac{3}{3} - \frac{1}{3} = 3\frac{2}{3}$$

1. $10 - \frac{8}{11}$

2. $8 - \frac{11}{23}$

3. $22 - \frac{9}{20}$

4. $61 - \frac{8}{19}$

5. $96 - \frac{32}{33}$

6. $19 - \frac{1}{15}$

7. $51 - \frac{3}{4}$

8. $2 - \frac{11}{23}$

9. $30 - \frac{7}{22}$

10. $211 - \frac{89}{90}$
