   A. Finished, had turned
   B. Turned, had finished
   C. Had finished, turned
   D. Had turned, finished

Part III Reading:

Read the article below and write the best answer on the spaces. Write the letter (A,B,C,or D)

"BATS"

Bats are not dirty, bloodthirsty monsters that are portrayed in vampire films. These animals groom themselves carefully like cats and only rarely carry rabies. Of the hundreds of species of bats, only a few rely on blood meals. In fact, the majority eat fruit, insects, spiders, or small animals. They consume an enormous number of pests, pollinate many varieties of plant life, and help reforest barren land by excreting millions of undigested seeds.

Almost all bats use echolocation to navigate, especially at night. As they fly, they emit a series of high-pitched squeaks at the rate of about fifty per minute. As these signals bounce off objects in their path, an echo is detected by the bats' sensitive ears, and they undertake corrective or evasive actions.

It is little-known fact that bats are highly social creatures. Thousands of individual bats may belong to a colony, hanging upside down in caves or in trees. Within their social systems, bats assume specialized roles. Some may guard the entrance to their caves others may scout for food, and still others may warn the colony of approaching danger.

1. What is the author's opinion of bats? _____

a) that they are dirty and they carry rabies
b) that they are like the monsters in the vampire films
c) that they are clean, helpful members of the animal world

LIVEWORKSHEETS
