

Write the correct answer

This energy is produced by the sun and is very important for the biosphere:

This energy is the result of movement of tiny particles within an object

This energy is made by vibrations. When an object vibrates, air particles around it vibrate too.

This is stored energy which is released when a chemical reaction takes place

This energy is used to power machines

This energy is the sum of potential and kinetic energy

This energy is stored in objects

This energy is produced by movement

This energy is light from the sun, it can be transformed into electrical using solar panels

Moving water spins turbines creating

When you use trees, plants and rubbish to make energy, you are using:

The heat escaping from the core of the earth is called:

Mechanical energies produced by wind farms are converted into:

Wind farms produce

Those are energy sources that never run out
