Dinosaurs

Dinosaurs were in many types, shapes and sizes. Scientists believed that their extinction was a result of climate changes which they couldn't adapt to. Other believed that an asteroid hit the earth which led to a dramatic change of the climate. Some dinosaurs were carnivores. They were meat eater. However, some were herbivores. They were plant eaters. All dinosaurs were hatched from eggs. Some walked on two legs, while others walked on four legs. They had claws to catch food. They had spikes to fight. Some dinosaurs had horns, tail and wings. Eventually, scientists believed that birds are the closest relative to the dinosaurs. In my opinion, dinosaurs are marvelous creature's despite of their extinction.
