

## How far is it?

We can calculate the  between two places on a map with a .

A  can help us to measure  (cm) on a map. Then, we can calculate the real distance in  (km).

|                           |
|---------------------------|
|                           |
| <input type="text"/>      |
|                           |
| <input type="text"/>      |
|                           |
| <input type="text"/>      |
|                           |
| <input type="text"/> (cm) |
|                           |
| <input type="text"/>      |
