

Our respiratory system (II) 4º

Drag and drop

carbon dioxide

muscles

oxygen

organs

Our respiratory system takes in and
and expels
All our and need
oxygen to function.

hairs

narrow

foreign

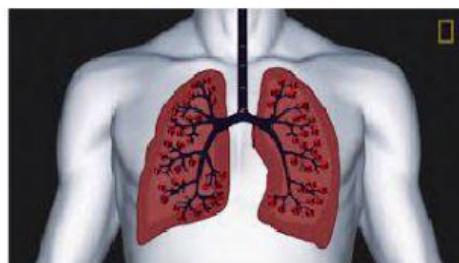

nostrils

The nose has two . They have little
 and are at the back. This is to
stop objects entering our respiratory
system.

tubes

trachea

bronchi

The divides into two that go into the lungs. These tubes are called the

squidgy

alveoli

lungs

The are like big sacks. They are , like a sponge.

they are made up of lots of little bags called
