

Revision Exam (Math)- Performance task-1

Grade - 5

Student Name - _____

Que1 : Write the below models into fraction

Model	Fraction
	 $\frac{\square}{\square}$
	 $\frac{\square}{\square}$
	 $\square \frac{\square}{\square}$
	 $\square \frac{\square}{\square}$

Que.2: A shopping mall is decorating for National Day.

They have 65 meters of UAE pennant flags to share equally among 12 stores.

How many meters of pennant flags should each store receive?

Write the fraction

 $\frac{\square}{\square}$

Write this as mixed fraction

 $\square \frac{\square}{\square}$

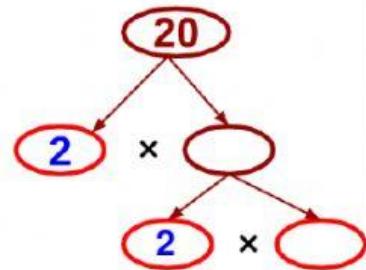

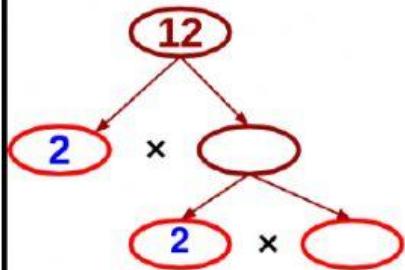

The answer is between the whole numbers

 \square

and

 \square

Que 3: Find the GCF of 12 and 20

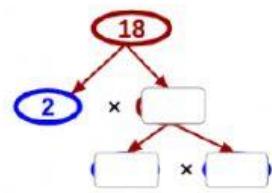

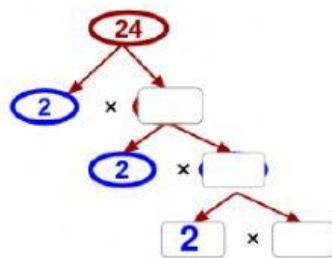

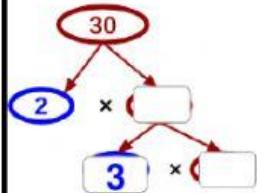

Prime factors of 12 = \times \times

Prime factors of 20 = \times \times

GCF = \times =

Ques 4: Find the GCF of 30, 24 and 18

Prime factors of 30 = \times \times

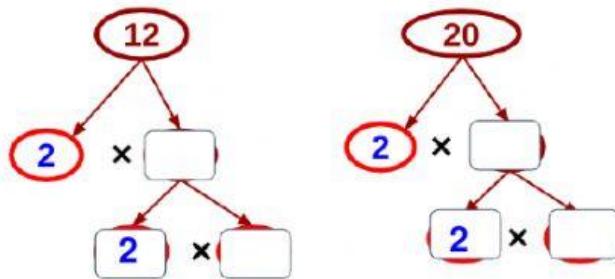

Prime factors of 24 = \times \times \times

Prime factors of 18 = \times \times

GCF = \times =

Ques 5: Write the simplest form of $\frac{12}{20}$

1. Find the GCF of 12 and 20

Prime factors of 12 = $\boxed{\quad} \times \boxed{\quad} \times \boxed{\quad}$

Prime factors of 20 = $\boxed{\quad} \times \boxed{\quad} \times \boxed{\quad}$

$$GCF = \boxed{\quad} \times \boxed{\quad} = \boxed{\quad}$$

2. Divide by GCF up and down

$$\frac{12 \div \boxed{\quad}}{20 \div \boxed{\quad}} = \frac{\boxed{\quad}}{\boxed{\quad}}$$

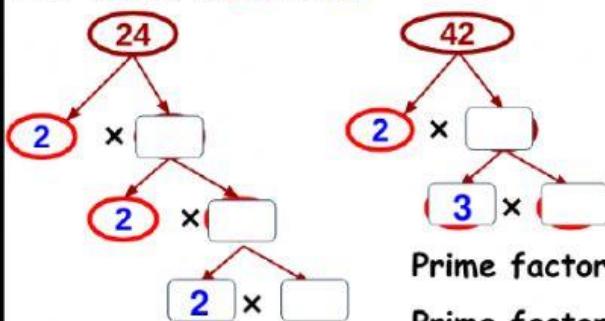

Ques 6: Musa runs 24 of 42 minutes of his training session.

(i) Write the fraction to represent this situation

(ii) Write the fraction into simplest form

$$(i) \text{ Fraction} = \frac{\boxed{\quad}}{42}$$

Find the GCF of 24 and 42

(ii). Divide by GCF up and down

$$\frac{24 \div \boxed{\quad}}{42 \div \boxed{\quad}} = \frac{\boxed{\quad}}{\boxed{\quad}}$$

Prime factors of 24 = $\boxed{\quad} \times \boxed{\quad} \times \boxed{\quad} \times \boxed{\quad}$

Prime factors of 42 = $\boxed{\quad} \times \boxed{\quad} \times \boxed{\quad}$

$$GCF = \boxed{\quad} \times \boxed{\quad} = \boxed{\quad}$$

Que7 : Find the LCM of 6 and 8 by listing the multiples

List the multiples

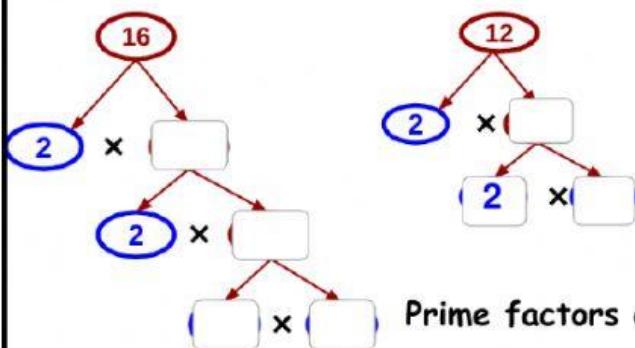

Multiples of 6 = 6, 12, , 24, , 36, 42, , 54, ...

Multiples of 8 = 8, , , 32, , 48, 56, ...

Common multiples of 6 and 8 = , ,

Least common multiple (LCM) of 6 and 8 =

Que8: Find the LCM of 16 and 12 using prime factorization

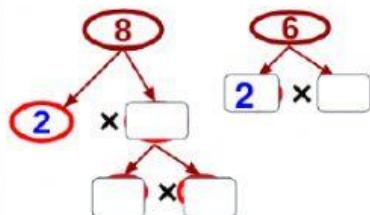

Prime factors of 16 = x x x

Prime factors of 12 = x x

$$\begin{aligned} LCM &= \boxed{\quad} \times \boxed{\quad} \times 2 \times 2 \times \boxed{\quad} \\ &= \boxed{\quad} \end{aligned}$$

Que9 : Compare $\frac{7}{8}$ and $\frac{5}{6}$

1. Find the **LCD** = **LCM** of \square and \square

Prime factors of 8 = $\square \times \square \times \square$

Prime factors of 6 = $\square \times \square$

$$\begin{aligned} \text{LCM} &= \square \times \square \times \square \times \square \\ &= \square \end{aligned}$$

2. Find **equivalent fractions** by making denominator equal to **LCD**

$$\begin{array}{r} 7 \times \square \\ 8 \times \square \end{array} \text{ and } \begin{array}{r} 5 \times \square \\ 6 \times \square \end{array}$$

$$\frac{21}{24} \text{ and } \frac{\square}{\square}$$

3. Compare the numerators

$$\begin{array}{r} 21 \square 20 \\ 24 \square 24 \\ 7 \square 5 \\ 8 \square 6 \end{array}$$

Que10 : Write the below fractions into decimal

Write $\frac{1}{2}$ as an equivalent fraction with denominator of 10 then write it's decimal value

Step 1 Find an equivalent fraction with a denominator of 10. $\frac{1}{2} = \frac{1 \times \square}{2 \times \square} = \frac{\square}{\square}$

Step 2 Write the fraction as a decimal. $\frac{5}{10} = \square$

Write $\frac{17}{20}$ as an equivalent fraction with denominator of 100 then write it's decimal value

Step 1 Find an equivalent fraction with a denominator of 100. $\frac{17}{20} = \frac{17 \times \square}{20 \times \square} = \frac{\square}{\square}$

Step 2 Write the fraction as a decimal. $\frac{85}{100} = \square$
