

1. $(a + b)^2 = a^2 + 2ab + b^2$

$$(X + 1)^2 = \square \square \square \square \square \square$$

$$(a + 2)^2 = \square \square \square \square \square \square$$

2. $(a - b)^2 = a^2 - 2ab + b^2$

$$(X - 1)^2 = \square \square \square \square \square \square$$

$$(a - 2)^2 = \square \square \square \square \square \square$$

3. $(a + b) \cdot (a - b) = a^2 - b^2$

$$(X + 1) \cdot (X - 1) = \square \square - \square \square$$

$$(X + 3) \cdot (X - 3) = \square \square - \square \square$$
