

Read the following passage and complete the table below:

Brazil has decided to build a new dam. It is Bello Monte Dam on the river Xingu in the Amazon. The Bello Monte Dam will be 90 meters high, 3,545 meters long and will cost around US \$18.5 billion.

The dam will produce about 11,000 megawatts of electricity so Brazil will less depend on fossil fuels. Also, economy will grow and other projects will start.

However, the dam would destroy a vast area of land. Also, about 16,000 people would have to leave their lands and homes, those people their lives depend on the river and the forest.
