

Name: _____

Match the themes with correct description

The destruction of the environment and wildlife

Man's greed on the environment

Protecting nature is a collective responsibility

Death of wildlife

Life in the forest was dying. From small creatures to big ones, a chain reaction has caused the death of several living things in the forest, but all of the deaths were pointing back to the industry. The pollution from the industrial area nearby might have contributed to water, air and ground pollution. The effects of pollution were then felt, with the death of animals and plants, causing the biodiversity in that area to be in chaos.

It is everyone's responsibility when it comes to the environment. We should do small things like recycling, and avoid buying plastic or other products which may contain hazardous materials to the environment or of animal sources. If every person play their part in protecting the environment, the world will be a better place, one small step at a time.

In all the cases, a chain effect led to the death of creatures or plants. On the surface, the ones who confess to the killings appear to be guilty. However, if we follow the chain of cause and effect, we realise that the real killer in all the crimes is us humans.

Man's greed causes them to use cheaper sources, such as coal burning, instead of cleaner but more expensive forms of energy. They also refuse to dispose of industrial water properly because it costs more. Their irresponsible attitude leads to the pollution of the environment and the destruction of nature and life
