LIVEWORKSHEETS

VII. Read the following text, then answer the questions below. (2 points)

United Nations officials say the use of energy from the sun could help agricultural areas in developing countries. They say that the use of solar technology could greatly improve the lives of millions of people.

Solar technology systems use energy from the sun to make electric power. Solar energy now is used mainly in homes. It supplies power for electric lighting, radios and televisions. It is also used to heat water. The UN Food and Agriculture Organization says now is the time to develop other uses for solar energy.

Nowadays almost two thousand million people in developing countries still have no electric power. In general, most poor farmers will not be able to purchase solar power systems. However, solar energy can provide some important social services for people in developing countries. They include water supply systems and cooling devices to store medicines.

1. What can people get from the sun with the solar technology systems?
2. Will most poor farmers be able to purchase solar power system?
3. Where is solar energy now used mainly?
4. What is solar energy used to do?
5. What can solar energy provide for people in developing countries?
